Mining uranium: supply chain responsibility and environmental impacts in Africa

Seminar | May 14th | 15:00-17:00 |
VVM bureau | Utrecht

netwerk van
milieuprofessionals

Nuclear reactors are running on uranium. The upstream part of the nuclear cycle is seldom discussed. However, environmental impacts are severe and the pollution covers large areas. During a two hour session, A. Lyamunda (Tanzanian activist CESOPE) tells about his work and the challenges he faces on a daily basis. F. Scheele (researcher SOMO) presents the findings from her research on mitigation of environmental impacts of uranium mining in Africa.
